## WHY LANGUAGE SCIENTIFIC?

Capsa Healthcare, a healthcare technology firm specializing in pharmacy automation and medical equipment, needed user manuals translated into German for a project with hospital partners. With no in-house translation resources, they turned to Language Scientific for support.

Language Scientific's medical expertise and human-reviewed approach ensured accurate, compliant translations. The project was delivered on time, with clear communication throughout, and German partners confirmed the materials were error-free.

## The Problem

Capsa Healthcare, a healthcare technology firm, needed user manuals translated into German for a project with hospital partners.

German presented unique challenges:

- Accurate medical terminology was critical for nurses and healthcare staff using the equipment
- Human-reviewed translations were essential, as machine translation alone was not trusted
- On-time delivery was required to support the project schedule

Capsa needed a trusted partner who could provide accurate, compliant, and professional translations without delays.

### RESULTS

**Accurate Translations, On-Time Delivery and Trusted Partnership**

*User manuals were translated promptly, keeping the project on schedule.*

*German partners confirmed translations were accurate, with no edits required.*

*Capsa avoided scrambling for local resources, saving time and ensuring confidence in the process.*

### ACTIONS TAKEN

- Delivered expert German translations of technical user manuals
- Applied medical and industry knowledge to ensure precise terminology
- Provided human-reviewed translations instead of machine-only output
- Maintained clear communication with regular status updates
- Ensured a smooth, turnkey process from start to finish

*Don Johnson said that they could have done a complete machine translation or a human-curated translation, and he doesn't trust machine translation with no oversight.*

*- "Everything for the project went smoothly on Language Scientific's end. I am glad we chose LS for this project."*

*— Don Johnson, Capsa Technical Writer.*
