

## WHY LANGUAGE SCIENTIFIC?

Longevity AI is a U.S.-based wellness planning platform for medical practices. After onboarding a new client in Mexico, the company needed a trusted partner to support the translation and localization of its platform into Spanish.

Because the platform monitors critical health metrics and generates customized wellness plans, Longevity AI required more than a basic translation. They needed Language Scientific's specialized medical, scientific, and software localization expertise to ensure the linguistic precision expected in professional healthcare settings.

## The Problem

Longevity AI initially used an AI-powered machine translation engine to generate a Spanish draft. However, the results were not medical-grade and included inconsistent terminology. Since the platform provides health-related information to medical practices and patients, a sub-par translation could create serious risks, including loss of trust, awkward user-facing language, and potentially incorrect medical information. The challenges included:

- Reviewing and correcting AI-generated Spanish translations
- Standardizing clinical terminology, health metrics, and user interface text
- Ensuring medical accuracy for healthcare professionals and patients
- Supporting a successful rollout for Longevity AI's new client in Mexico

Without expert human review and medical validation, Longevity AI risked launching a localized platform that did not meet the accuracy and trust required in healthcare settings.

## RESULTS

### Spanish-Language Platform Rollout, Medical Accuracy, Regional Expansion Support

*Rolled out the Spanish-language version of the platform in Mexico*

*Strengthened confidence with Longevity AI's new enterprise client*

*Opened the door for future localization into additional markets*

## ACTIONS TAKEN

- Reviewed and validated the AI-generated Spanish translation
- Corrected and standardized clinical terminology, health assessment metrics, and user interface text
- Applied native-speaker subject matter expertise with real-world medical training
- Combined medical, healthcare, and software localization expertise
- Provided an official Certificate of Translation Accuracy upon completion
- Delivered responsive project management and competitive pricing

*"No issue with Language Scientific, everything was great."*

*"We will likely reach out when localizing to additional markets."*

— Matt Kronowitz, Product Manager, Longevity AI
